

## **Extreme & V-Tower Vaporizer by Arizer Instructions**

Turn on the **Extreme Vaporizer** and increase the temperature to its highest setting.

Let the **Extreme Vaporizer** run at this level for 30 minutes. As this will burn off the manufactures packing oils on the **ceramic heating element**. Make sure you do this in a well ventilated area.

Now you can adjust the temperature back to **380 degrees**, this is a good starting point for vaporization. Adjusted as needed.

Insert your **finely ground herbs** into the Cyclone Bowl and place on the Extreme Vaporizer. Leave on for 1-2 minutes before usage.

Attach the Vapor Whip to the **Cyclone Bowl**.

Draw as much air as is comfortable to achieve desired **vapor delivery**. Repeat 4-5 inhales and then stir your herbs, repeat as long as herb is viable.

Discard the contents of the **Cyclone Bowl** and repeat as desired.

If using the **balloon fill system**, simply attach the balloon and use one of the three fan settings to fill balloon.
